## Interview with Mr. Jedsada Kridsanant

How do you feel to be representative of KMUTNB and participating in Summer School with University of Applied Sciences Bremerhaven, Germany?

In my opinion, this is the best journey of my life because this scholarship program provides me a great opportunity to learn and know new things such as Economic system, European education system. I spent two weeks in Germany with 25 students from 8 different countries and I attended 2/3 courses during morning and afternoon and sometime in the evening, it was a great experience because teacher made it in the coffee shop or restaurant like an informal class. I have had the possibility to visit some famous cities in Europe like Paris and Amsterdam, know how to manage my life when I am away from my parents and the last special one is I got a lot of new friends from many countries around the world.

Interview with  
Mr. Jedsada Kridsanant

What have you learned from the course and your time spending in the program?

The most significant thing that I've learned from this summer school is about the big difference between the education system in Thailand and the European countries, when I studied there, I had to adapt myself sometimes because many professors use to ask the feedback from students and make the lecture more dynamic, it was very useful and interesting for me and I felt very happy to improve myself from this issue. When I was available from studying, I often did many activities like dinner and explore Bremerhaven city by walking with my international friends and I think it's the best way to learn the city and meet new friends.
